📇 Curriculum vitae

As a starting PHP programmer I taught myself the basics of PHP and MySQL. I also gained more knowledge about XHTML, CSS and Javascript which not only made it possible to build small websites and HTML mails but also building and maintaining advanced CMS systems and web applications.
More than 15 years later after starting with (serious) programming, and almost 10 years of working experience, I'm capable of working on any product or project which is web-based.
